

Criterion		Sub-Criterion / Expected Outcome	A – Excellent	B – Good	C – Satisfactory	D – Insufficient
Data Model & DW Compatibility		Star/snowflake /galaxy schema — relationships, cardinalities, no redundancy	Complete clean model, fully DW-compatible, no circular dependencies	Mostly correct; minor gaps or 1-2 redundancies	Partial or poorly structured model	No structured model
		Alignment with the data warehouse & decision-maker needs	Full alignment with DW; decision-maker needs fully addressed	Mostly aligned; minor gaps	Partial alignment	No alignment with the DW
DAX Measures		Basic aggregations: SUM, AVERAGE, COUNT, COUNTROWS, DISTINCTCOUNT	All used correctly, contextually relevant, error-free	Present and mostly correct; minor errors	Minimal — 1 or 2 basic measures only	No DAX measures
		Filter context: CALCULATE, ALL, ALLSELECTED, KEEPFILTERS	Correct and intentional use of filter context manipulation	CALCULATE used; context not always mastered	Attempted but incorrect context usage	Absent
		Time intelligence: SAMEPERIODLASTYEAR, PREVIOUSMONTH, DATESYTD, DATESBETWEEN, DATEDIFF	Multiple time functions used correctly — MoM, YoY, YTD comparisons meaningful	1-2 time functions used correctly	Attempted; partial or incorrect results	Absent
		Ranking & top N: RANKX with explicit tie-breaking, TOPN + ALLSELECTED for dynamic top N	RANKX and TOPN used correctly with proper filter context	Used with minor context issues	Attempted — incorrect ranking behavior	Absent
		VAR chaining: multi-step variables with intermediate results, RETURN clearly structured	Complex VAR/RETURN chains — readable, efficient, avoids redundant evaluation	Variables used but not always chained or optimized	VAR used once or incorrectly	Absent
KPIs		At least 2 business KPIs with thresholds, gauges, and conditional formatting, clearly presented with strategic narrative (page order, tooltips, legends, titles)	Business KPIs — impactful, thresholds well-chosen, gauges used, conditional formatting applied, KPIs relevant and aligned with objectives	KPIs defined; thresholds present but basic	Incomplete KPIs or missing thresholds	No KPIs
SDG Alignment		At least 1 KPI explicitly linked to an SDG with justification	Clear SDG link, justified choice, KPI calibrated to SDG target & indicator	SDG identified; link to KPI partially justified	SDG mentioned without real KPI integration	No SDG alignment
Visualizations & Interactivity		Core charts: bar, line, card, table — relevant choice & clean design	All charts purposeful, well-labelled, properly formatted	Present and readable; minor design issues	Minimal or poorly chosen basic charts	Absent or incoherent
		Advanced standard visuals: waterfall, scatter + play axis, small multiples, decomposition tree / Custom / AppSource visuals: Radar/Spider, Bullet chart, Chiclet slicer, Heatmap matrix	≥2 advanced visuals used purposefully and correctly, fully functional and well-formatted	1 advanced visual used correctly, minor configuration or formatting issues	Attempted but poorly configured	Not used
		AI visuals: Key Influencers, Q&A pinned visual, Anomaly Detection	AI visual(s) used correctly — insight generated and explained	AI visual present; insight not fully exploited	AI visual added but misconfigured	Not used
		Interactivity: cross-filtering, slicers, drill-through, drill-down, page navigation	Full interactivity — all features work seamlessly together	Most features present; minor UX issues	Basic slicer only	No interactivity
		Bookmarks: used for navigation, storytelling states, or toggle show/hide panels	Bookmarks drive a clear navigation or storytelling flow	Bookmarks present but limited to 1 use case	Bookmarks added without clear purpose	Not used
Template & Visual Identity		Custom theme — colour palette, typography, logo consistent throughout	Professional custom theme applied consistently across all pages	Adapted base theme; mostly consistent	Basic/default theme; inconsistencies	No theme — default Power BI colours
Deployment & RLS		Published to Power BI Service — dataset refreshed, dashboard shared	Full deployment — report published, dataset refreshed, workspace shared	Partially deployed — missing refresh or sharing	Deployed but not functional	Not deployed
		Row-Level Security (RLS) — roles configured, tested and documented	RLS fully functional — multiple roles, tested with Test as Role, documented	RLS configured but not fully tested	RLS attempted — incomplete	Absent
Accessibility		Alt-text on visuals, colour-blind-safe palette, sufficient contrast	Alt-text added to all visuals, colour-blind palette used, contrast checked	Alt-text on most visuals; palette partially accessible	Minimal accessibility effort	No accessibility considerations
Git Deployment		Report .pbix, dataset, DAX doc versioned on Git with meaningful commits	Complete repo — .pbix, documentation, README, meaningful commit history	Repo present; incomplete content or no README	Repo created but barely used	Not done
Data Refresh Automation		refresh automatic	Automatic refresh with executive synthesis	Automatic refresh configured; summary page present but generic or partially automated	Refresh attempted but not meaningful; auto-generated summary only	Not done
★ BONUS Mobile APP		Mobile App — fully functional, user-friendly, tested	Mobile app fully functional, intuitive, tested successfully	App functional; minor UX or feature issues	App partially functional or basic features only	Not done
★ BONUS Power Automate Notifications		Power Automate flow triggered on KPI threshold breach — alert sent (email/Teams)	Flow functional — correct trigger on data alert, meaningful notification content	Flow configured; trigger or notification incomplete	Flow attempted but not functional	Not done
★ BONUS ML Integration		ML algorithm integrated (Python/R)	Fully integrated; visual output meaningful, explained	Integrated; results partially interpreted	ML attempted — not functional or not meaningful	Not done
