

Launch of the Business Intelligence Project

Speciality: ERP-BI

Academic year : 2025/2026

Presentation outline

- **Business Intelligence Project Module: Overview Goals**

- **Module Goals & Objectives**
- **Project Procedure / Methodology**
- **Technologies and Tools (Tech Stack)**
- **Evaluation Criteria**
- **Project Showcase**
- **Integration of SDGs**
- **Detailed Project Schedule**
- **Presentation of Topics**
- **Team Allocation**
- **Assignment of Projects**

🎯 THE MAIN GOAL

The implementation of a Decision-Making Project

- Provide an opportunity to concretely demonstrate the value and relevance of **innovative technologies** in understanding, analyzing, and visualizing data from businesses.
- These initiatives highlight the effectiveness of **Business Intelligence solutions**, emphasizing their essential contribution to decision-making and information management within organizations.

Presentation of the BI project modules – Goals

Data Accessibility

OBJECTIVE:

Make data easily accessible to relevant stakeholders.

GOAL:

Ensure that decision-makers can access the information they need when they need it.

Data Integration

OBJECTIVE:

Integrate data from various sources into a unified view.

GOAL:

Provide a comprehensive and cohesive understanding of organizational data.

Data Quality

OBJECTIVE:

Ensure the accuracy and reliability of data.

GOAL:

Improve the quality of data to enhance decision-making confidence.

Predictive Analytics

OBJECTIVE:

Implement predictive modeling and analytics.

GOAL:

Anticipate future trends and outcomes for proactive decision-making.

Alignment with Business Strategy

OBJECTIVE:

Align BI initiatives with overall business objectives.

GOAL:

Ensure that BI efforts contribute directly to the success of the organization.

■ Security and Compliance

🎯 OBJECTIVE

Ensure data security and compliance with regulations.

🚩 GOAL

Protect sensitive information and adhere to industry and legal standards.

■ User Experience

🎯 OBJECTIVE

Provide an intuitive and user-friendly dashboards.

🚩 GOAL

Enhance the overall user experience to encourage adoption and engagement.

■ Continuous Improvement

🎯 OBJECTIVE

Foster a culture of continuous improvement.

🚩 GOAL

Regularly review and enhance BI processes and technologies to stay relevant.

■ Strategic Decision Support

🎯 OBJECTIVE

Provide strategic decision support.

🚩 GOAL

Enable executives to make well-informed decisions that drive organizational success.

GIMSI

01. Identification

- Business Environment
- Company Identification

02 Design

- Objective Definition
- Dashboard Design
- Choosing KPIs
- Data Collection

03 Implementation

- Software Selection
- Integration and Deployment

04 Improvement

- System Audit

Timeline (Part1)

The PA-BI is an 84h module (42h in class sessions + 42h out of class sessions*) distributed as follows:

GIMSI BI Project Timeline

GIMSI methodology ensures structured BI project delivery from launch to validation.

Timeline (Part2)

Timeline (Part3)

Note: For a detailed timeline, please see below.
[Detailed Timeline](#)

Technologies and Tools

Final Presentation Week 15

- Presentation (10 minutes) + demonstration Video (10 minutes).
- A short video (capsule) (3 minutes max)
- A detailed final report in English.
- Discussion with members of the jury (10 minutes).

Project Ball : SDGs into integrated projects

Be A Part Of The Solution

SUSTAINABLE DEVELOPMENT GOALS
17 GOALS TO TRANSFORM OUR WORLD

The projects ball « bal des Projets » at Esprit : A major event

- Started in 2012, project-based learning is one of the cornerstones of the innovative pedagogy that sets ESPRIT apart. The academic projects carried out are of a sufficiently high and professional level to be visible and recognized.
- **The ball « Bal des projets »** is the crowning glory of each year's event, showcasing the best of the students' projects.
- Every year, teams of students from all disciplines and levels take part in the Project Ball, presenting their projects.

Previous editions

Collaboration with APII for the incubator competition.

**24 projects went through the Start'APII program
and 8 projects were incubated.**

Evaluation

Week	Assessment Type
W4	Individual
W6	Group
W9	Individual
W10	Individual
W14	Individual
W15	Group

Evaluation

Assessment is carried out periodically, both individually (technical validation) and in groups (presentation/assessment). The average for this module is calculated as follows:

$$\text{Final average} = 70\% \text{ Individual grade} + 30\% \text{ Group grade}$$

→ Individual score: Average of individual scores (weighted by sprint)

→ Group score: Average of group scores

Except if:

- Individual score < 10: Final score = Individual score
- Individual score - Group score < 3: Final score = 60% Individual score + 40% Group score.
- Group score - Individual score > 3 : Final score = 90% Individual score + 10% Group score

Rules and penalties

- Attendance:

- Unjustified absence during coaching sessions: will result in a zero for that session.

- Work during / for coaching sessions:

- Each week, a piece of work must be handed in during the session:
 - If the group or student fails to deliver the work requested, a zero will be awarded.
 - If the group or student turns in incomplete work, sanctions will be applied and the work must be completed before the start of the next session.

Rules and penalties

- Submission of reports:

- Exceeding the deadline communicated before each validation = -25% of the group grade for the phase
- Reports must be submitted in English

- Project validation:

- Project validation requires P-BI score ≥ 10

- Catch-up:

- This project is a **non-catchable module (no retakes during the catch-up session)**

Team composition / Subject assignment

Group composition: 5 to 6 people per team

- Students who are not assigned before the start-up session will be randomly assigned to the missing groups directly by tutors.
- If a class exceeds the permitted number of groups of 6, a draw will be held between teams and then between team members to balance the groups.
- No requests for group changes are permitted.
- Each team must choose a representative

Topic assignment

- The topics will be assigned randomly by the coaches.

Projects presentation

Context & Objectives:

The goal is to develop a comprehensive Business Intelligence (BI) ecosystem enhanced with Artificial Intelligence (AI) and Machine Learning (ML). The project aims to exploit historical data (orders, invoices, logistics) to optimize commercial performance, improve customer experience, and support strategic decision-making.

Importance of the Project:

- Identify top-performing products and analyze customer segments to maximize sales and conversion rates.
- Provide interactive dashboards for real-time tracking of KPIs (turnover, margins) and anticipate market trends.

Key Strengths of the Project:

- Implementation of AI models to forecast product demand and segment customers for personalized marketing.
- Usage of ML to detect irregularities in financial transactions, invoices, and returns to secure revenue.

Context & Objectives :

In a competitive Tunisian market, the goal is to implement a robust Business Intelligence (BI) and Data Analytics solution for a parapharmacy network. The project aims to leverage transactional data (sales, invoices, inventory) to steer commercial performance, optimize stock levels, and support strategic decision-making for B2B relationships (pharmacies and resellers).

Importance of the Project:

- Precise tracking of turnover, margins, and profitability by product category and brand to identify growth drivers.
- Monitoring of stock levels to mitigate risks of shortages and overstocking, ensuring efficient replenishment.

Key Strengths of the Project :

- Centralization of heterogeneous data sources into a structured Data Warehouse for a single source of truth.
- Forecast sales trends, analyze seasonality, and detect billing anomalies.

Context & Objectives :

In an era of rapid urbanization, cities face growing challenges related to congestion, pollution, and safety. To address these issues, a Business Intelligence solution is required to exploit historical multi-source data in order to assess urban mobility performance and measure its impact on SDGs, particularly energy, climate, and air quality.

Importance of the Project :

- Monitor critical metrics such as delays, service cancellations, and route regularity to reduce congestion and improve transit efficiency.
- Analyze accident hotspots and user perception (stress/satisfaction) to create safer, more people-centric urban environments.

Key Strengths of the Project:

- Interactive dashboards enabling deep-dive comparisons by zone, transport line, and time slots to support data-driven governance.
- Integration of AI and the creation of a Composite Mobility Performance Index (CMPI) for advanced benchmarking.

Context & Objectives:

With growing organizational complexity and fluctuating membership levels, the Scouts of Tunisia require a centralized BI and AI solution to better exploit historical multi-source data and support effective administrative, financial, and operational resource management.

Importance of the Project:

- Operational Optimization: Monitor critical KPIs such as budget consumption rates, activity participation, and unit performance to ensure financial sustainability and operational efficiency.
- Strategic Retention: Analyze membership evolution trends and engagement levels to identify "at-risk" units and improve member retention strategies across different seasons.

Key Strengths of the Project:

- Deployment of dynamic dashboards enabling deep-dive comparisons by unit, age group, gender, and season to pinpoint strengths and weaknesses.
- Utilization of Machine Learning to predict future membership numbers and budget needs, combined with an AI-driven recommendation engine to suggest priority actions and detect anomalies in organizational dynamics.

Context & Objectives:

In a fast-growing Tunisian event market, EventZella (by Teckcatalyze) generates valuable data through its budgeting and service booking ecosystem. However, this data is not fully exploited. A centralized Business Intelligence and AI solution is required to analyze historical multi-source data and enhance strategic decision-making.

Importance of the Project:

- Operational Optimization: Monitor critical KPIs such as reservation conversion rates, cancellation ratios, and provider response times to ensure platform efficiency and service quality.
- Strategic Growth: Analyze market trends and beneficiary satisfaction (NPS) to identify opportunities for provider improvement and optimize the "Smart Budgeting" features.

Key Strengths of the Project:

- Deployment of dynamic dashboards enabling deep-dive comparisons by service category, provider rating, and seasonality to pinpoint high-performing segments and market gaps.
- Utilization of Machine Learning to refine the budget estimation algorithm, combined with an AI-driven recommendation engine to maximize booking conversions.

Context & Objective:

With the rapid growth of padel, clubs face challenges in managing reservations, optimizing court usage, and improving customer experience.

The Padel BI Solution aims to leverage multi-source data (bookings, players, revenues) to build an intelligent Business Intelligence system that supports data-driven decision-making.

Project Importance :

- Monitor key KPIs such as court occupancy, cancellations, and revenue.
- Analyze player behavior and peak usage periods.
- Support pricing and resource optimization.

Key Strengths :

- Interactive dashboards for performance analysis.
- Insights by time period, court, and player profile.
- AI-based demand forecasting and booking optimization.

*“In God we trust. All others must
bring data.”*
